

Solenoid directional valves type SDKE

direct operated, ISO 4401 size 10

Spool type, two or three position direct operated valves with threaded solenoids.

Solenoids (2) are made by:

- wet type screwed tube, different for AC and DC power supply, with integrated manual override pin (1)
- interchangeable coils, specific for AC or DC power supply, easily replaceable without tools - see section 5 for available voltages

Standard coils protection IP65

Optional coils are available with IP67 AMP Junior Timer, Deutsch, lead wire connections (options XJ, XK, XS) or with North American Standard Certification cURus, without connector (option XUL).

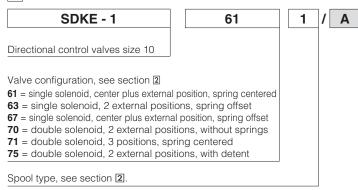

Wide range of interchangeable spools (1),

The valve body (3) is 3 chamber type made by shell-moulding casting with wide internal passages ensuring low pressure drops

Mounting surface: ISO 4401 size 10 Max flow: 150 I/min

Max pressure: 350 bar

1 MODEL CODE

Options, see note 1 at section 4

24 DC ** Seals material. see section 4: = NBR = FKM Series number BT = HNBR Voltage code, see section 5

00-AC = AC solenoids without coils **00-DC** = DC solenoids without coils

= standard coil without connector

XUL = coils certified cURus without connector See section 13 for available connectors, to be ordered separately

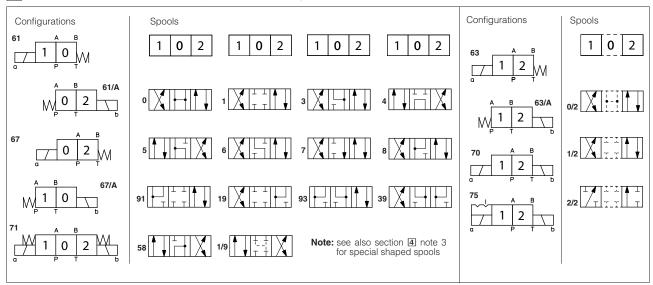

Coils with special connectors, see section 11 **XJ** = AMP Junior Timer connector

XK = Deutsch connector

X

XS = Lead Wire connection

2 CONFIGURATIONS and SPOOLS (representation according to ISO 1219-1)

3 MAIN CHARACTERISTCS, SEALS AND HYDRAULIC FLUIDS - for other fluids not included in below table, consult our technical office

Assembly position / location	Any position for all valves except for type - 170* (without springs) that must be installed with horizontal axis if operated by impulses			
Subplate surface finishing	Roughness index Ra 0,4 - flatness ratio 0,01/100 (ISO 1101)			
MTTFd values according to EN ISO 13849	150 years, for further details see technical table P007			
Ambient temperature	Standard execution = -30°C ÷ +70°C /PE option = -20°C ÷ +70°C /BT option = -40°C ÷ +70°C			
Seals, recommended fluid temperature	NBR seals (standard) = -20°C ÷ +80°C, with HFC hydraulic fluids = -20°C ÷ +50°C FKM seals (/PE option)= -20°C ÷ +80°C HNBR seals (/BT option)= -40°C ÷ +60°C, with HFC hydraulic fluids = -40°C ÷ +50°C			
Recommended viscosity	15÷100 mm²/s - max allowed range 2.8 ÷ 500 mm²/s			
Max fluid contamination level	ISO4406 class 20/18/15 NAS1638 class 9, see also filter section at www or KTF catalog			
Hydraulic fluid	Suitable seals type	Classification	Ref. Standard	
Mineral oils	NBR, FKM, HNBR	HL, HLP, HLPD, HVLP, HVLPD	DIN 51524	
Flame resistant without water	FKM	HFDU, HFDR	ISO 12922	
Flame resistant with water	NBR, HNBR	HFC		
Flow direction	As shown in the symbols of table 2			
Operating pressure	Ports P,A,B: 350 bar; Port T 210 bar for DC version (250 bar with option /Y); 160 bar for AC version			
Rated flow	See diagrams Q/\Delta at section 6			
Maximum flow	150 I/min, see operating limits at section 🗇			
	7 1 5 -			

3.1 Coils characteristics

Insulation class	H (180°C) for DC coils F (155°C) for AC coils		
	Due to the occuring surface temperatures of the solenoid coils, the European standards EN ISC		
	13732-1 and EN ISO 4413 must be taken into account		
Protection degree to DIN EN 60529	IP 65 (with connectors 666, 667, 669 correctly assembled)		
Relative duty factor	100%		
Supply voltage and frequency	See electric feature 5		
Supply voltage tolerance	± 10%		
Certification (only for XUL coils)	cURus North American Standard		

4 NOTES

1 Options

A = Solenoid mounted at side of port B (only for single solenoid valves). In standard versions, solenoid is mounted at side of port A.

WP = prolonged manual override protected by rubber cap - see section [12].

L7, L8 see section 10 = device for switching time control (only for DC solenoids).

L7 and L8 are available only for spool type 0/1, 1/1, 3/1, 4 and 5.

2 Type of electric connectors DIN 43650, to be ordered separately - see section [13].

666 = standard connector IP-65 for direct connection to electric supply source.

667 = as 666, but with built-in signal led.

669 = with built-in rectifier bridge for supplying DC coils by alternate current (AC 110V and 230V - Imax 1A).

3 Spools

- spools type 0 and 3 are also available as 0/1 and 3/1 with restricted oil passages in central position, from user ports to tank.
- spool type 1 is also available as 1/1, properly shaped to reduce the water-hammer shocks during the switching.
- spool type 1/9 has closed center in rest position but it avoids the pressurization of A and B ports due to the internal leakages.

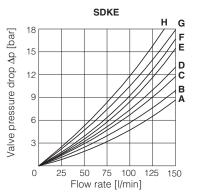

5 ELECTRIC FEATURES

External supply nominal voltage ± 10%	Voltage code	Type of connector	Power consumption (2)	Code of spare coil													
12 DC	12 DC	666 or 667		CAE-12DC													
14 DC	14 DC					CAE-14DC											
24 DC	24 DC		36 W	CAE-24DC													
28 DC	28 DC		or	or	or	30 W	CAE-28DC										
110 DC	110 DC					-			-	-		-			-	-	
220 DC	220 DC				CAE-220DC												
110/50/60 AC	110/50/60 AC		100 VA	CAE-110/50/60AC (1)													
230/50/60 AC	230/50/60 AC		(3)	CAE-230/50/60AC (1)													
110/50/60 AC	110 DC	000	00.144	CAE-110DC													
230/50/60 AC	220 DC	669	36 W	CAE-220DC													

- (1) In case of 60 Hz voltage frequency the performances are reduced by 10÷15% and the power consumption is 90 VA
- (2) Average values based on tests performed at nominal hydraulic condition and ambient/coil temperature of 20°C.
- (3) When solenoid is energized, the inrush current is approx 3 times the holding current.

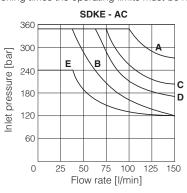

6 Q/ΔP DIAGRAMS based on mineral oil ISO VG 46 at 50°C

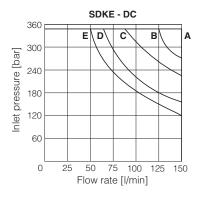

Flow direction Spool type	P→A	Р→В	А→Т	В→Т	P→T	В→А
0, 0/1, 0/2, 2/2	Α	Α	В	В		
1, 1/1, 1/9, 6, 8	Α	Α	D	С		
3, 3/1, 7	Α	Α	С	D		
4	В	В	В	В	F	
5, 58	Α	В	С	С	G	
1/2	В	С	С	В		
19, 91	F	F	G	G		Н
39, 93	F	F	G	G		Н

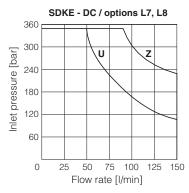

7 OPERATING LIMITS based on mineral oil ISO VG 46 at 50°C

The diagrams have been obtained with warm solenoids and power supply at lowest value (V_{nom} - 10%). The curves refer to application with symmetrical flow through the valve (i.e. $P \rightarrow A$ and $B \rightarrow T$). In case of asymmetric flow and if the valves have the devices for controlling the switching times the operating limits must be reduced.

Curve	AC Spoo	l type DC
Α	0/1	0, 0/1, 1, 1/1, 3, 3/1, 1/2, 0/2, 8
В	4, 5, 19, 91	6, 7
С	0, 1/1, 3, 3/1	19, 91
D	1, 1/2, 0/2	4, 5
E	6, 7, 8, 2/2	2/2
U	-	4, 5
Z	-	0/1, 1/1, 3/1

8 | SWITCHING TIMES (average values in msec)

Valve	Switch-on AC	Switch-on DC	Switch-off AC	Switch-off DC
SDKE + 666 / 667	40	60	25	35
SDKE + 669	60	_	90	_
SDKE-*/L7 - SDKE-*/L8	_	100÷150	_	100÷150

Test conditions:

- 50 l/min; 150 bar
- nominal supply voltage
- 2 bar of back pressure on port T - mineral oil ISO VG 46 at 50°C

The elasticity of the hydraulic circuit and the variations of the hydraulic characteristics and temperature affect the response time.

9 SWITCHING FREQUENCY

Valve	AC (cycles/h)	DC (cycles/h)
SDKE + 666 / 667	7200	15000

10 DEVICES FOR SWITCHING TIME CONTROL

The shifting time control devices L7 and L8 are specifically designed to reduce shocks in the hydraulic circuit, sometime occurring at the valve switching.

The soft movement of the actuator is obtained through the control of the spool shifting time, by means of calibrated restrictors ① installed in the solenoid core.

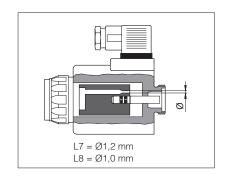

The soft shifting device version is possible only with DC solenoids.

Two options with different switching effect are available:

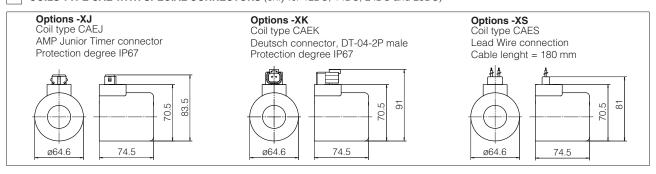

L7 = calibrated restrictors diam. 1,2 mm

L8 = calibrated restrictors diam. 1,0 mm

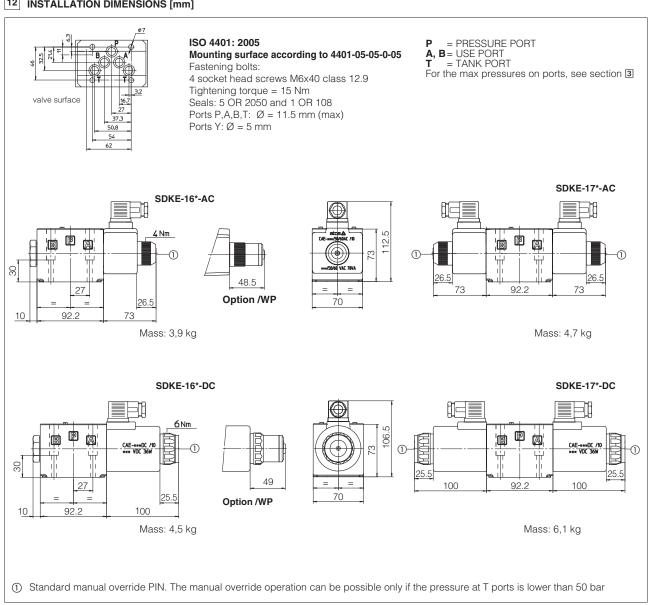

see section 8 for switching time

11 COILS TYPE CAE WITH SPECIAL CONNECTORS (only for 12DC, 14DC, 24DC and 28DC)

12 INSTALLATION DIMENSIONS [mm]

13 ELECTRIC CONNECTORS ACCORDING TO DIN 43650 (to be ordered separately)
